

PRESS RELEASE

CHIMERA TECH LAUNCHES SMART SAILOR, THE DIGITAL CREW MEMBER THAT MAKES EVERY BOAT SMARTER, SAFER AND MORE EFFICIENT

Rome, September 2, 2025

A digital crew member that makes the boat a truly smart, connected, and secure environment — this is the goal of **Smart Sailor**, the new product developed by **Chimera Tech Srl**, an innovative startup specialized in advanced technological solutions.

Smart Sailor acts as an intelligent, always-connected brain for the vessel, capable of integrating with existing onboard systems to ensure continuous monitoring, system automation, remote management, and intelligent assistance.

Smart Sailor redefines safety at sea: it is the **first modular and scalable system** that integrates sensors, cameras, data connectivity, and energy management.

An innovative solution that collects and analyzes real-time information from the boat, transforming it into a more protected, intelligent, and constantly supervised environment.

The platform is designed for **boat owners, yachtsmen, and sailors**, enhancing the onboard experience to a higher level — with the same ease of use as modern smart home technologies.

Smart Sailor will make its official debut at the **Cannes Yachting Festival** (September 9–14) and subsequently at the **Genoa International Boat Show** (September 18–23) within the **Lazio Region pavilion**.

Main Features of Smart Sailor

- **Real-time monitoring:** Continuous control of engine, batteries, power consumption, and onboard sensors, with live access to onboard webcams.
- **Intelligent automation:** Automatic management of daily operations for safer and more relaxed cruising.
- **Remote control:** Through a mobile app, users can monitor energy status, alarms, and onboard devices anytime, anywhere.
- **Anchor Mode:** Safety at anchor with optimized load management, battery preservation, ambient comfort, and crew alerts.
- **Smart navigation:** Integrated data from GPS, wind, depth, and weather sensors with AI-driven consumption analysis and navigational suggestions.
- **Racing and performance:** Digital logbook, automatic maneuver recognition, VMG/VMC analysis, and replay features with shareable reports.

A “Digital Crew Member” Always on Board

Thanks to artificial intelligence and a “smart” alert system, **Smart Sailor** provides continuous and proactive assistance — capable of warning the owner in case of critical events (bilge water, weather conditions, intrusions) and suggesting more efficient navigation decisions. **Smart Sailor** is already available and can be installed on both sailing and motor vessels of different types.

More information is available on the official website: www.smartsailor.it.

“With Smart Sailor, we wanted to bring to the boating industry the same digital revolution that has transformed our homes and cities. Our goal is to give every boat owner a simple, reliable, and innovative tool that enhances safety, efficiency, and the pleasure of being at sea,” said **Marco Chimenti**, Founder and CEO of **Chimera Tech**.
